Project-1

Data Analytics Process

Example: When someone is planning to invest and looking for satisfactory investment schemes.

PLAN: The person first figures out the amount that he can invests.

PREPARE: Then he prepares where he can invest like in gold, property, Bank FD's etc. and get satisfactory Rate of Interest.

PROCESS: Then he can check or google all this in depth and check where he can invest safely as per the amount he wants to invest and gain much with less risk.

ANALYZE: Then he can analyze from the online customer reviews about the organization and shortlist the best one's from them as per his requirement.

SHARE: Now he can communicate with the investor that this much amount he wants to invest and where he wants to invests, so that investor can suggest him whether it is right or there is some risk in it. And according to that he can find the best where he can invest safely.

ACT: Then he finally invests the money.!!
